Circuit Equations.

There are two (related) approaches: Derive the circuit (differential) equations in the time domain, then transform these ODEs to the s-domain; Transform the circuit to the s-domain, then derive the circuit equations in the s-domain (using the concept of "impedance"). We will use the first approach.

12.1 Definition of the Laplace Transform
Similar to the application of phasortransform to solve the steady state AC circuits, Laplace transform can be used to transform the time domain circuits into S domain circuits to simplify the solution of integral differential equations to the manipulation of a set of algebraic equations.
