5.3 Human Population Growth

Populations are groups of individuals belonging to the same species that live in the same region at the same time. Populations change over time due to births, deaths, and the dispersal of individuals between separate populations. When resources are plentiful and environmental conditions appropriate, populations can increase rapidly.

Population Biology Basics - ThoughtCo

Key points: In exponential growth, a population's per capita (per individual) growth rate stays the same regardless of population size, making the population grow faster and faster as it gets larger. In nature, populations may grow exponentially for some period, but they will ultimately be limited by resource availability.

Exponential growth & logistic growth (article) | Khan Academy

The factors that can affect population size are the birthrate, death rate, and the rate at which individuals enter or leave the population. What happens during exponential growth? Under ideal conditions with unlimited resources, a population will grow exponentially.
