### Math 380: Introduction to Discrete Mathematics

A set  $X$  is a subset of set  $Y$  (Written as  $X \subseteq Y$ ) if every element of  $X$  is an element of set  $Y$ . Example 1 – Let,  $X = \{1, 2, 3, 4, 5, 6\}$  and  $Y = \{1, 2\}$ . Here set  $Y$  is a subset of set  $X$  as all the elements of set  $Y$  is in set  $X$ . Hence, we can write  $Y \subseteq X$ .

**Introduction to Discrete Mathematics**

Discrete Mathematics – It involves distinct values; i.e. between any two points, there are a countable number of points. For example, if we have a finite set of objects, the function can be defined as a list of ordered pairs having these objects, and can be presented as a complete list of those pairs. Topics in Discrete Mathematics
